

Home Automation

The Chilion Power GATEWAY integrates a Z-Wave module to enable it to communicate with any other Z-Wave enabled appliance. This opens up a world of opportunities from power consumption measurement of individual appliances to thermostat, lighting and security control applications.

The Z-Wave eco-system has been thriving thanks to its interoperability allowing any Z-Wave enabled device to communicate with any other module or controller. This means that our GATEWAY can control a myriad of devices to expand its capabilities well beyond solar monitoring and into complete home automation and monitoring.

Here is a list of extensions that could be added to the GATEWAY:

- Power Sensor for any appliance or for the entire home
- Smart Energy Switch to control and monitor appliances
- Switches and Dimmers as well as wall receptacles for lighting and other functions
- Door locks for security and monitoring
- Motion detectors and sensors
- Temperature Sensors and Thermostats
- and many more...

Chilicon Power

Rule-21 compliant grid-tie microinverters for 60, 72, 96, and 128 cell PV modules.

AC Coupling enabled with Freq-Watt and Volt-Watt Control Modes.

Zero Net Export / Self Supply Modes with CT Clamp + Gateway Integration.

Complete energy generation and control systems for residences and commercial buildings.
